

February Newsletter

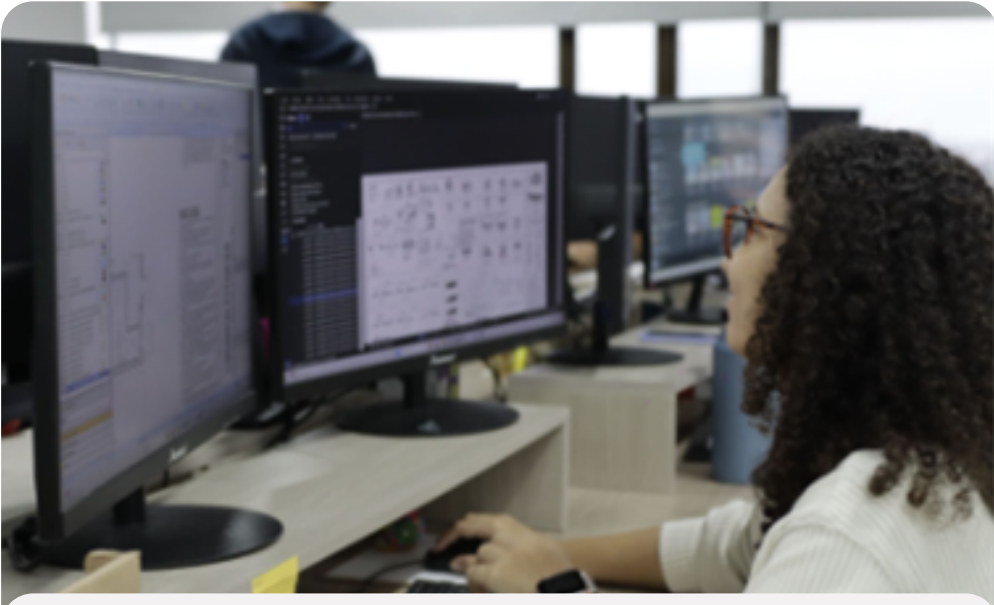

Smart drafting, BIM and AECO services with your standards, hitting all targets: costs, lead times, and quality.

From Drawings to Reality: Lubavitch Educational Center

We're excited to see the Lubavitch Educational Center project fully installed and successfully delivered. This educational campus serves students from preschool through high school, creating spaces designed to support learning and community.

Last year, our team supported Ralph Hernandez from Altitude Facade with shop and fabrication drawings for the curtain wall system, doors, and canopy, providing technical coordination throughout the process. Seeing a project like this come together on site, knowing it will serve young people for years to come, makes the work especially rewarding.

Assistant Project Manager Demand - NEW Service

In the 2025 4G experience, there was strong demand for APM services, with our teams actively supporting projects through schedule coordination, document control, submittal tracking, cost monitoring, and day-to-day project support—helping keep projects moving efficiently and teams focused on delivery.

Driving Growth and Alignment Across Florida

We're visiting new clients and exploring new opportunities across Florida while strengthening alignment through face-to-face conversations and project reviews. These meetings help us better understand current needs, offer hands-on support, and keep our teams closely aligned with project goals and expectations.

A Moment to Celebrate Our Culture

In February, our team takes a moment to celebrate the Barranquilla Carnival, one of Colombia's most important traditions, known for its vibrant music, colorful costumes, and joyful spirit. It is always a great opportunity to connect as a team and celebrate the diversity that shapes our culture.

Behind the Scenes at IKA: Design & BIM in Action

IKA is a project in Santa Marta (Colombia), currently being developed by Conterra, part of the 4G Architecture Holding Group. Our team supports the project through architectural design development and BIM coordination, providing continuous BIM follow-up to ensure design consistency, improve multidisciplinary coordination, and deliver high-quality results. This approach helps control costs, reduce risks, and prevent unexpected issues throughout the project lifecycle.
